

MIXED USE PROPERTY TYPES

Do you ever arrive at a location that's both residential and commercial and wonder how you're supposed to document the property type on your fire report?

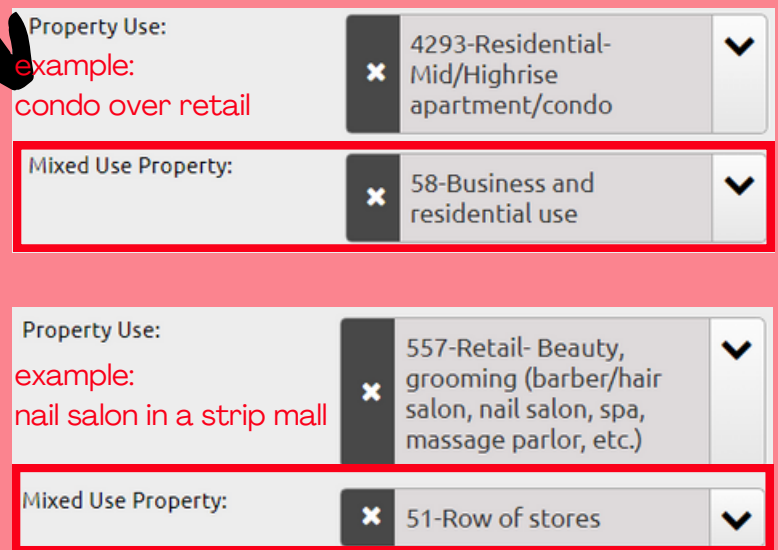

There's a dropdown for that!

MIXED USE PROPERTY

1) Select the proper Location Type
Location = WHERE in relation to where you were dispatched?

2) Select the main use type of the property where the incident occurred
Property = HOW is the property used?

3) If mixed use, select the secondary or mixed use type.

IMPACT

TRAINING: Informs scenario design and rotation.

Would you train differently for fires at restaurants in a **row of stores versus** in an **enclosed mall**? For storage facilities that are **stand-alone versus** part of **business/residential mixed use**?
