

# DID YOU KNOW?

## BLEEDING PATIENTS

A general wound that leads to bleeding, shouldn't have a primary impression of “*Bleeding or Hematoma Post Procedure/Medical Device*”. The injury is the condition that led to treatment (primary/secondary impression).

1. Reporting bleeding from a general wound: **Primary Impression: Injury** - [Bleeding Body Part]

The screenshot shows a medical reporting interface. On the left, there are labels for 'Provider's Primary Impression:', 'Provider's Secondary Impressions:', 'Possible Injury:', and 'Cardiac Arrest:'. On the right, a dropdown menu is open, displaying a list of injury types: 'Injury', 'Injury - Abdomen', 'Injury - Ankle', 'Injury - Ear', 'Injury - Elbow', 'Injury - Epidural Hemorrhage from Trauma', 'Injury - Eye and/or Orbit', 'Injury - Face', and 'Injury - Foot'. The 'Injury' option is currently selected and highlighted in yellow.

2. Describe in the narrative that the result of the injury was bleeding or hemorrhaging.

### Patient Care Report Narrative:

**Head Injury**- Laceration to the back of the head, with bleeding controlled. No deformity or crepitus. **Bleeding due to impact from vehicle accident.**
