

DID YOU KNOW?

OCTOBER 2021

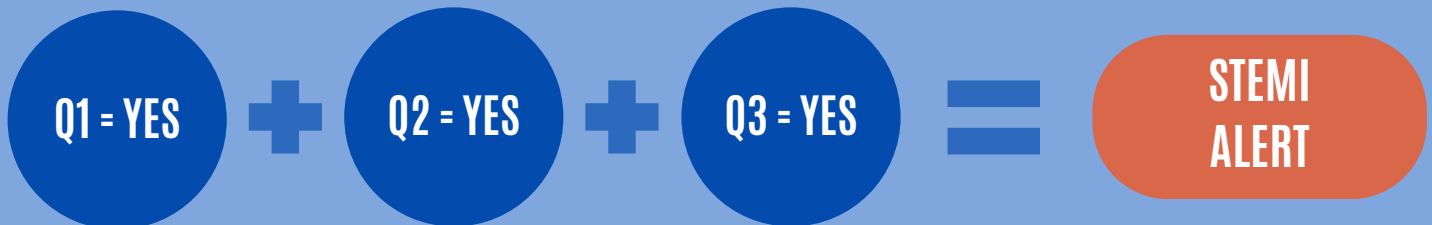

STEMI ALERT VS NOTIFICATION

The difference between STEMI Alert and STEMI Notification will help the hospital prepare accordingly when a STEMI patient is transported.

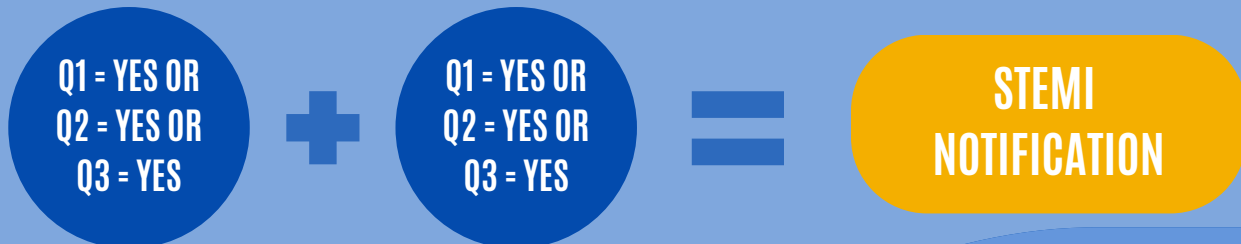

When treating a possible STEMI patient, consider these three questions:

1. Does the **clinical picture** suggest Acute MI?
2. Does the 12-lead ECG demonstrate **ST-segment elevation**, suggestive of 'Acute MI'?
3. Does the **automated algorithm** output state 'ACUTE MI'?

If YES to all three, then 'STEMI Alert' on the ePCR

If YES to two, then 'STEMI Notification' on the ePCR
