

DID YOU KNOW?

NOVEMBER 2021

AIRWAY MANAGEMENT

Only 80% of patients with an advanced airway procedure in ImageTrend also have a properly documented ETCO₂.

ETCO₂ monitoring is required for ALL advanced airways, including supraglottic airways (e.g. I-gel, King Airway, etc.)

Per the FRD EMS Manual, if you cannot obtain an ETCO₂ reading, remove the airway and ventilate with a BVM.

You can record ETCO₂ confirmation one of two ways:

1. Airway Confirmation (Advanced Airway tab)

Airway Device
Placement Confirmed
Method:

Find a Value...

2. Patient Procedure (Procedure tab)

Procedure:

Assess - Capnography
(ETCO₂)

Additionally, if an advanced airway is placed, the data from the Zoll monitor must be imported into the ePCR so that the capnographic (waveform) and capnometric (numeric value) data is captured in the report
