NFIRS INCIDENT TYPE & ePCR DISPOSITION

'**INCIDENT TYPE**' in a *NFIRS* report

Incident Type:	!	⌄
First Due:		Find value...
		111-Structure - Building fire

and
'**DISPOSITION**' in the *ePCR*

Disposition:	!	⌄
Incident Number:	!	Find value...
		Treated & Transported

should always be SELECTED FIRST because:

- The visible and required fields in the *NFIRS* report and *ePCR* are driven by the selected incident type and disposition, respectively.
    - Some fields are required by *NFIRS*/*OEMS*/*NEMSIS* to be BLANK for a given *incident type* or *disposition*. Changing the *incident type* or *disposition* may hide these fields that need to be BLANK, triggering **validation errors.**
    - If you change the incident type in the NFIRS report after it has been started, go to Menu > Clear Modules to reduce the likelihood of validation errors.
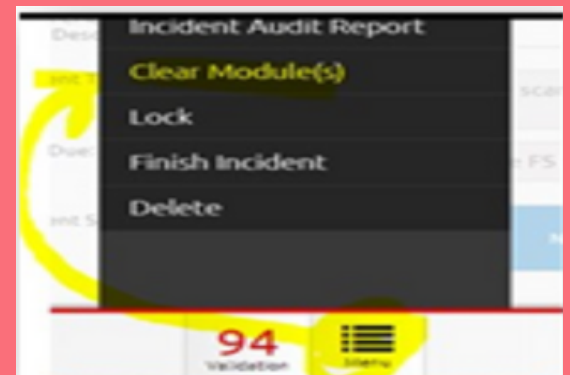

DAD JOKE

Q: Wanna hear a joke about paper?
A: Nevermind -it's tearable
